

## Technical Information

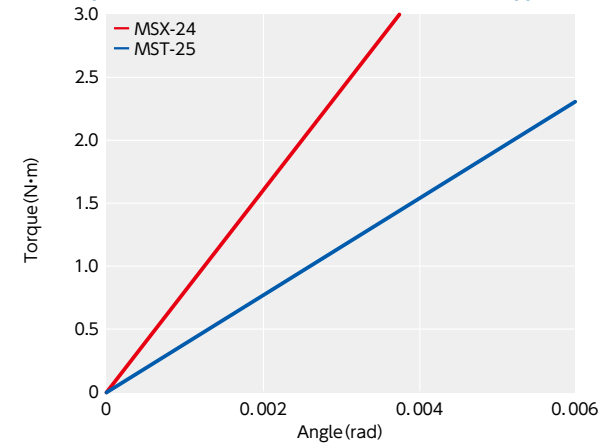

### ● Eccentric Reaction Force

### ● Thrust Reaction Force

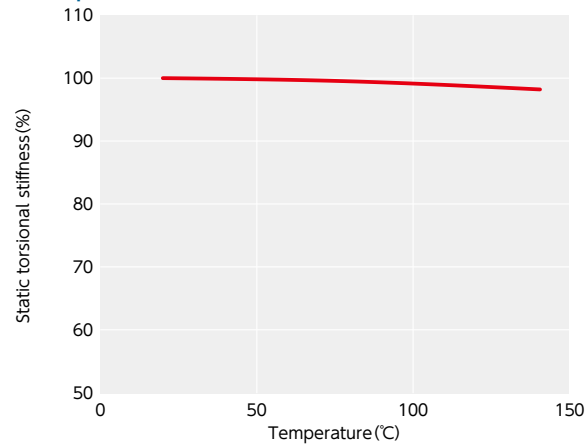

### ● Comparison of static torsional stiffness (slit-type)

**MSX** have high torsional stiffness and responsiveness. Optimal for high-speed and precision positioning for servomotors, etc.

### ● Change in static torsional stiffness due to temperature

This is a value under the condition where the static torsional stiffness at 20°C is 100%.

**MSX**'s change in torsional stiffness due to temperature is small and the change in responsiveness is extremely small. However, if the unit is used under higher temperature, be careful about misalignment due to elongation or deflection of the shaft associated with thermal expansion.
